88 STANDARD TYPES OF VARIABLE AIR CAPACITORS

APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with $\frac{1}{4}$ " diameter shafts to permit adjustment of

the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a $\frac{1}{4}$ " hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

FEATURES—The MAPC series is similar to the APC series of capacitors in that identical materials and assembly methods are employed. The silicone treated steatite bases and all brass nickel plated metal parts with exception of the phosphor bronze rotor wiper assure the same type of reliable performance that the APC series provides.

HIGH VOLTAGE CAPACITORS TYPE OF

85°C GLASS CAP — PLASTIC FILM DC FILTER

TYPE OF Capacitors are housed in glass tubes with metal-to-glass soldered ferrules. Capacitor element is an improved plastic dielectric type, impregnated with a highly purified and inhibited mineral oil.

All glass containers with 'D' dimensions of 19/32 have 2-1/2 inch long 18 tinned copper pigtail leads.

HIGH VOLTAGE CAPACITORS TYPE LK

MYLAR* PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed statite bushings are used, and in the voltage ranges of 2000 and greater, statite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

METAL CAN ELECTROLYTIC CAPACITORS

FP-WP capacitors are designed for 85° C operation, and have standard twist-prong mounting lugs with solder terminals. PFP-PWP types use standard EIA printed circuit terminals and can be used in place of normal solder terminal types. FPS is special mounting for auto radios. FP-WP types may be adapted to printed circuit mounting by using an FPA Adapter Kit (Net Each, 27¢). All types use "etched cathode" construction for long life operation, and have an exclusive vent and seal design. Standard tolerance: Up to 50 WVDC, -10% to +150%; 51 to 350 WVDC, -10% to +100%; 351 WVDC and up, -10% to +50%. *Sizes shown are at end of listing.

MALLORY Tantalum Capacitors

Mallory tantalum foil capacitors are available in either **etched** or **plain foil, polarized** or **non-polarized**, and in two temperature grades (+85° C or +125° C). Standard ratings shown below and on the next page are listed with **uninsulated** cases. For **insulating** sleeve, add "one" to type shown (CL20 becomes CL21, etc.) and

add 10¢ to prices shown. Case sizes, tolerances and industrial net prices are shown in the table at the bottom of this page. These capacitors are also available to Mallory commercial numbers (TAF, TAG, TBF, TBG, etc.). For details on these numbers ask for Technical Bulletin 4-65.

Mallory TT capacitors are made from very high purity aluminum foil, deep-etched to provide maximum capacity per unit of volume. Etched cathode construction assures long, hum-free operation. Utilize all-welded construction; exhibit exceptionally low DCL and ESR. Supplied in aluminum case with insulating sleeve; wire leads $2\frac{1}{2}$ in. ($=\frac{1}{4}$ in.). Temperature Range: -30°C to $+85^{\circ}\text{C}$, operating. Tolerance: -10% , $+150\%$, ± 50 WVDC; -10% , $+100\%$, 60 WVDC and up.

Mallory TAM tantalum capacitors are made to the same exacting standards as the TAS types. The TAM is designed for printed circuit board applications and has parallel leads $1\frac{1}{4}$ " long spaced .200" apart. Case is premolded plastic with polarity markings on the top. Temperature range is -55°C to $+85^{\circ}\text{C}$. Standard tolerance: $\pm 20\%$. Stability and life characteristics are ideal for low voltage, low impedance transistorized circuits. Complete technical specifications and typical life test data is given in Technical Bulletin 4-47.

MTP/MTPH ULTRA-MINIATURE TANTALUM CAPACITORS

Mallory MTP/MTPH capacitors provide the greatest capacity-voltage product of any tantalum type. Sintered anodes are housed in special silver cases with elastomer end seal, and are completely insulated. MTPH types are manufactured to rigid "Minuteman II" standards with zero failures in 3.7 million unit-hours of testing. Type MTP is the commercial equivalent. Operating Temp.: -50° C to +85° C. Tolerance: $\pm 20\%$. DCL is extremely low. See bulletin 4-70 for details.

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost. For more complete information write for Bulletin 2236.

Types 271-272-273-291-292-293-294

TYPE 291

TYPE 272

Sangamo transmitting cast mica capacitors are supplied in seven basic case sizes. They are encapsulated in a high quality thermo-setting compound which eliminates moisture intrusion and makes them highly shock resistant. These capacitors are designed for frequencies ranging from 100 kilocycles per second to 3 megacycles per second and are ideally suited for high current and high voltage circuits.

In capacitance and current ratings, Sangamo cast mica units are equivalent to MIL-C-5 Types CM65 through CM90 in molded and ceramic cases, but in environmental capability, operating temperature range, physical size, mounting configuration and reliability, they are far superior. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2324.**

ELECTRONIC COMPONENTS

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is Ethern, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

For more complete information on other ratings, tolerances and voltages, write for Bulletin 2421.

Type CP72 capacitors are furnished in drawn metal cases and are designed to comply with the requirements of specification MIL-C-25. They are impregnated with various dielectric oils to guarantee the desired electrical characteristics available. Capacitors rated at 3000 volts or less are normally supplied with solder lug (B) terminals capable of accommodating a #14AWG wire. Type D and E terminals may be substituted if desired. If brackets are required, specify a choice of spade, lug or footed type.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

For more complete information write for Bulletin 2425.

SPRAGUE CAPACITORS

VITAMIN Q® SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Her-

a higher insulation resistance and longer life than comparable units with ordinary oils.

metically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: -55°C to $+85^{\circ}\text{C}$ and -55°C to $+125^{\circ}\text{C}$. Because of their Vitamin Q impregnation, these subminiature capacitors have

performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses

are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

21P METALLIZED PAPER CAPACITORS

Designed to Operate at 125C WITHOUT VOLTAGE DERATING—Extremely Important in Military and Industrial Equipment Where Higher Temperatures Are Encountered.

Quality of These Capacitors Is Surpassed only by Type 118P Units Described on Opposite Page.

High Insulation Resistance—at 85C, Minimum Product of Insulation Resistance and Capacitance Is 20 Megohm-Microfarads. At 125C, Minimum Product is 1.0 Megohm-Microfarads.

• Hermetically Sealed With Glass-to-Metal Solder-Seal Terminals—Capacitor Cases Are of Corrosion Resistant Materials—Similar in Appearance to Type 118P.

• May Be Operated at Low Voltages, Unlike Many Other Metallized Capacitors.

• For Complete Technical Data, See Latest Issue of Engineering Bulletin 2210.

• Capacitors Listed Below Are Ungrounded Case (Insulated Section) Units Without Outer Insulating

Sleeves. For Information on Other Styles Consult Your Sprague Industrial Distributor.

• Call Your Sprague Industrial Distributor For Quantity Prices.

• For Units With Outer Plastic Insulating Sleeve, Change Last Digit in Cat. No. From 2 to 4.

FILTEROL® FILTERS

FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices... A 3-terminal network with the case as one terminal... The selected filter should have a rating higher than the continuous operating current of the offending device... A single Filterol connected to the high side of the line is usually sufficient... In severe cases a Filterol in each leg of the power line may be necessary... For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor... Provides exceptionally high attenuation at frequencies above 5 megacycles... Intended for small devices with continuous current ratings up to 20 amperes.

Tansitor

ELECTRONICS, INC.

TANSITOR TANTALUM CAPACITORS

TYPE: TES -55°C to +85°C

Tansitor Type TES tantalum capacitors are unique small foil tantalum capacitors ideally suited for use in printed circuits. They are similar in performance to CL34 and CL24 type capacitors, but offer significant savings in space because both leads emerge from one end of the capacitors. They operate reliably over the temperature range of -55°C to +85°C.

CASE DIMENSIONS (Uninsulated)*

CASE SIZE	Dimensions (Nominal) Length x Diameter, Inches

As the name implies, Tansitor Type CM or custom-made capacitor "packages" are designed to fill special or unusual tantalum capacitor needs, most frequently in the area of extra high capacitance.

In most cases, Type CM units have employed tantalum foil internally. By its nature, however, a CM unit may employ internal sections of solid or wet sintered anode tantalum capacitors where their respective characteristics are desired. Combinations of foil, solid and wet styles are also available, if needed.

A wide range of ratings are available, with capacitance values as high as 310,000 microfarads. The CM series, however is adaptable for many ratings beyond those suggested, even to 1 farad and above, if required.

Dual or plural ratings are available in a single case or other components can be potted in the same case with the capacitors. For specific applications contact Tansitor Electronics, Inc.

TANSITOR TANTALUM CAPACITORS

TYPES: CL64 & CL65 — CHARACTERISTICS "B" & "C"
—55°C to +85°C and —55°C to +125°C

Tansitor wet sintered anode capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965C for MIL types CL64 and CL65. Encased in a fine silver can, the sintered porous tantalum anode provides exceptionally high capacitance per unit volume. These units exhibit extremely low leakage currents, low power factor, and little change in capacitance with frequency.

As opposed to "Shoulder Type" construction of other wet types, the CL64 and CL65 offer a straight cylindrical shape, readily lending them to flat circuit applications. CL 64 and CL65 styles are equivalent to Tansitor Type W. Tansitor Type WF equivalent with neutral electrolyte is also available.

CASE DIMENSIONS — CL64, CL65 (Uninsulated)*

CASE SIZE	Dimensions (Nominal) Length x Diameter, Inches
T1	0.453 x 0.188
T2	0.641 x 0.281
T3	0.766 x 0.375

*For dimensions of insulated units add approximately 0.065" to length, 0.015" to diameter. Basic case dimensions for insulated style are same as uninsulated.

TANSITOR TANTALUM CAPACITORS — TYPE WF

(Equivalent to MIL Styles CL64 & CL65)
-55°C to +85°C and -55°C to +125°C

Tansitor type WF capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965 for the ratings listed under MIL Types CL64 and 45, except that tantalum foil is used in place of tantalum sintered slugs. In addition to the advantages in volume, low leakage current and low error factor normally associated with this style of capacitor, the WF also has an acid-free construction and voltage ratings up to 300 VDC at 25°C and up to 200 VDC at 125°C where 125 VDC and 85 VDC were previously considered the upper limits. The WF is lighter in weight, too, thus offering even more advantage for aerospace applications.

Case Dimensions (Uninsulated)*

Case Code	Length x Diameter, Inches, Nominal
D1	0.453 x 0.188
D2	0.541 x 0.281
D3	0.766 x 0.375

*For insulated case dimensions add 0.063" to length, 0.015" to diameter. Basic case dimensions for insulated style are same as uninsulated.

TANSITOR TYPE S POLAR AND NON-POLAR SOLID TANTALUM CAPACITORS

Tansitor Type S Polar and Non-polar Solid Tantalum Capacitors are designed for continuous, dependable use over their full operating range of -80°C to $+125^{\circ}\text{C}$. The units are similar to MIL Styles CS12 and CS13.

These advantages for the design engineer are further enhanced by the excellent showing made by S type units under conditions of high frequency application and when subjected to extensive vibration and shock, including all the stringent environmental requirements of MIL-C-26655, Styles CS12 and CS13.

CAEON SOLVENT #27

(Trichlorotrifluoroethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

- NON-FLAMMABLE
- VIRTUALLY NON-TOXIC
- CHEMICALLY AND PHYSICALLY PURE
- CHEMICALLY AND THERMALLY INERT
- STABLE

SEE PRICE LIST
ON THIS PAGE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeson #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluble in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface "Residue-Free". All standard methods of using a solvent may be employed.

TERMINAL
INSERTION TOOL

Our B200A is a feed through terminal stamped from half hard Brass and is plated. Two serrated slots .032" x .190" will accommodate 3 or more wires per slot. The serrations will hold wires in place until soldered. The two .062" dia. holes near the bottom end will accommodate 2 or more wires. Insertion or extraction of the B200A terminal is easily accomplished by using our B200-T insertion tool or a pair of long nose pliers. Because of the locking notch in the top of the B200A terminals will not fall out of the breadboarding deck. B200A terminals are packaged in bags of 25, 100 and 1,000.

GS 200A SPRING

The GS200A "Genie Spring" is a solderless connector and will hold many wires from all directions. The Genie Spring can be secured to the breadboarding deck using our B200A terminal, a #4 self tapping sheet metal screw or a #3-48 screw and nut. GS200A "Genie Springs" are packaged in bags of 25, 100 and 1,000.

ICORE
ELECTRO-PLASTICS, INC.

subsidiary of ICORE INDUSTRIES

Electro-Plastics offers a complete versatile series of air core inductors designed for RF transmission, or other equipment requiring high Q factors in the range from 100 to 500. Standard coils are available for prototype, production, or test use. These coils may be used for pi output circuits, conventional LC output circuits, interstage and oscillator circuits. All Air Dux coils are constructed of tinned wire wound on large low-loss polystyrene rods for the highest mechanical strength and lowest electrical losses.

DUX is a trade name synonymous with quality. Workmanship and materials set the highest standards in the industry. Coils are free of defects or ICORE will replace free of charge.

DUX STICK COILS (T SERIES)

1/2 to 3" diameter tinned copper stick coils are available in various TPI (turns per inch), wire sizes and lengths. 4", 5" and 6" diameter coils, as well as silver plated coils, are available on special order.

PRECUT PI DUX®

1/2 to 3" diameter precut coils with mounting plate for direct use in pi networks. Each coil has inductance of 18 micro henries. Alternate turns provided for ease of tapping. Catalog numbers 106A, 1014A, 1212A, 1411A, 1609A, 2007A, 2008A.

WIDER-PITCH PI DUX

1/2 to 3" diameter precut coils are similar to standard pi dux except that each coil has two different pitches. The reduced inductance per turn and wider pitch facilitates the tapping of low inductances. The vari-pitch constructions provide a higher Q due to space factor. Catalog numbers — 820D10, 1212D6, 1608D6, 2008D5, 2008D4.

SERIES PI DUX

500 and 1000 watt pi dux assemblies are compact yet conservatively rated. The high frequency coil sections are silver plated for high circuit efficiency. A complete technical sheet is included with each assembly. Catalog numbers — 195-1 (500 watt); 195-2 (1000 watt).

DUX BALUN

These coils match impedance in both transmitters and receivers, without adjustment, from 10 ohms to 80 meters. Also match 75 ohms unbalanced to 300 ohms, or 75 ohms balanced. Easily adaptable outputs from transmitters with power up to 50 watts if SWR is held low.

No. B2009—One balun coil (two required) with plastic mounting strips, insulator and hardware.

No. MB2009—Metal mounting plate with plastic terminal plate and hardware (less coax connector).

DUX COIL CLIPS

Dux coil clips permit convenient tapping of coils and rapid movement of coils from turn to turn, where soldering is undesirable. Because of large gasprayer area, clips will not slip. Special solder hole permits fast soldering of leads.

INDUCTOR LEAD MATERIAL

Standard All leads are 1 $\frac{1}{16}$ " minimum length.

The leads of standard sizes cataloged, are 99.9% oxygen free copper. Before manufacturing, the coating is pure tin hot dipped a minimum thickness of 0.0006 inch. After manufacturing into molded inductors the leads are hot dip coated with 60/40 lead solder with a minimum thickness of 0.0006 inch.

MILLER MOLDED COILS CONFORM TO MIL-C-15305C

This group of molded chokes affords the design engineer a wide range of inductance values, current ratings, and sizes which will fulfill most normal design requirements. Manufactured under strict Quality Control supervision and tested in accordance with MIL Standard 105 the user is guaranteed uniformity and reliability in every coil. This series conforms to MIL-C-15305, Grade and Class 7.

% RATED

Tabulated currents in milliamperes are maximum values based on a temperature rise not to exceed 35° C., nor wattage dissipation in excess of listed values.

Shielded Subminiature Adjustable R.F. Coils

These compact adjustable coils offer a minimum inductance range with relatively small changes in the tuning adjustment. It is accomplished through the use of a coil assembly. Magnetic shielding is achieved through the use of a core while the metal shield of ferrite effect is achieved by the ferrite printed circuit terminals on base and shield.

Ceramic Adjustable R.F. Coils

The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly of any setting through use of a newly designed tension device on the bushing.

R.F. Chokes with Axial Leads

These chokes cover an inductance range from 1 microhenry to 10 millihenries in 5 decades with B coils per decade. Inductance values in parentheses of approximately 50%. Either single layer or 3-pi universal windings are used. Minimum low distributed capacitance. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form $\frac{1}{16}$ " diameter x $\frac{1}{16}$ " long. Iron core form $\frac{1}{16}$ " diameter x $\frac{1}{16}$ " long. Leads are $\frac{1}{16}$ " long.

F.M. Stereo Multiplex Inductors

Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F.M. carrier in the conventional way while L minus R amplitude modulates a 38KC stereo-phonetic subcarrier, and the resulting double side-band AM signal (23-KC) with suppressed carrier, likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and at the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

Communications I.F. Transformers

Designed for experimental use in communications equipment where selectivity and stability are important. The 100 kc. I.F. transformer and BFO coil are intended for tube application, while the 455 kc. crystal filter I.F. transformers have taps on the winding to allow for use with both tubes and transistors. The 1800 kc. I.F. transformer offers the best possible "Q" with stability to give a degree of selectivity that compares with lower frequency I.F. transformers. This transformer is for use with tubes only. Part number 1770 is a double tuned I.F. transformer having taps on both Primary and Secondary winding.

Micro Miniature F.M. Variable Capacitor

A companion variable capacitor to our part No. 2108 ceramic variable. The ceramic material has a temperature coefficient of -120 parts per million per degree C over the range -20 to +70°C. The use of silvered ceramic rotor and stator assemblies results in a capacitor that is completely free of microphonics. This is very important in the design of small F.M. receivers that are subject to shock and vibration. Size .51" sq. x .39" deep. Ant. Section 3.0 to 19.0 pf. Osc. Section 3.0 to 19.0 pf. Trimmers both sections 1.5 to 5.0 pf.

Micro Miniature B.C. Variable Capacitor

To our knowledge this unit represents the smallest two section Broadcast Band variable capacitor generally available. The capacitor is manufactured by evaporating silver on the ceramic plates, which are lapped to insure perfect mechanical register. This construction assures against shock and vibration with a complete absence of microphonics. Dimensions .60" sq. by .43" deep. Ant. Section 6.5 to 145 pf. use JWM #2010. Osc. Section 6.5 to 69.7 pf. use JWM #2069. Trimmers on both sections 1.5 to 6.5 pf.

Precision Variable Capacitors

The capacitors we list in this group represent the highest standards that can be achieved in a commercial product. The rotor shaft revolves in a ball race at both front and back, with the torque controlled very closely. Each section has its own wipers grounded to the frame to assure that the rotor does not present ground loops. The stator in each section is supported on four ceramic pillars to assure excellent mechanical stability as well as insulation resistance better than 1000 megohms. The complete mechanical assembly is silver plated to keep R.F. losses to a minimum.

inductors

Toroidal Inductors

Magamo toroidal inductors are designed and manufactured to meet the highest standards of quality and reliability with maximum attention to user convenience. The use of powdered molybdenum permalloy cores assures inductors with a high Q factor and exceptional stability of inductance. Types ET and LT encapsulated toroids, specifically designed for printed circuit board mounting, feature a unique coil protection scheme and construction that is virtually impervious to moisture. Types WT (wax-impregnated) and NT (unimpregnated) units display the same electrical qualities.

ENCAPSULATED UNITS

Terminals—The terminals are soft brass with a hot solder finish and are made on automatic screw machines to a special design which minimizes moisture creepage. The terminal length beyond the mounting surface is 0.13" minimum. The 0.04" diameter permits use in printed circuit boards with or without eyelets. The terminal ends are rounded to simplify assembly.

Inserts—The inserts are also made on automatic screw machines to a design which minimizes moisture creepage and provides a convenient and rigid means of mounting the inductors.

Header and Terminal Assembly—The terminals and the insert are hot molded into the header, an important feature in making the unit moisture resistant.

Encapsulation—The coil is rigidly held and protected from shock or vibration damage by a specially selected epoxy encapsulating compound. Vacuum encapsulation assures a void-free envelope around the coil.

Mounting—All units are designed so the terminal area is elevated from the mounting surface. This permits easy flux removal and prevents moisture accumulation.

WAX-IMPREGNATED UNITS

Sangamo Type WT inductors are available in all standard core sizes described in bulletin 2721A. The electrical characteristics of these units are identical to those of corresponding Sangamo Type ET encapsulated inductors. Units can be supplied on special order without wax-impregnation. These are designated Type NT inductors.

Impregnation: All standard units are impregnated in a high quality, electrical grade, micro-crystalline wax which provides effective protection against moisture.

Leads: In accordance with MIL-W-16878, leads are stranded tinned copper lead wire with Type B insulation. Minimum length is 6 inches.

MAXIMUM OPERATING TEMPERATURE:

105°C for encapsulated units
65°C for wax-impregnated units.

MILITARY APPLICATIONS

Sangamo inductors meet or exceed all requirements of military specification MIL-T-27B for grade 5, Class R and life expectancy X.

For smooth rotary control of components requiring Vernier adjustments. Suitable for use where panel space is at a premium. Durable, ruggedized ball bearing mechanism.

LIMIT STOP COMPONENTS

Designers can now consider the limit stop as a component to design with, such as potentiometers, capacitors, or other standard units. The simplicity of adjustment and the large number of available turns enables the stop range to be set with extreme precision. Conveniently located dual locking screws maintain settings under all conditions of shock and vibration.

Typical End Product

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

SAFETY KNOBS

NEW!

"PRESS-TO-TURN" KNOBS.

Knobs spin freely... and **MUST BE PRESSED-IN** while making changes.

Developed specifically to prevent inadvertent changing of settings.

For basic dimensions, see our "Deluxe Instrument Knobs", (90, 125, 175 and 225 series).

SLIP-CLUTCH

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For $\frac{1}{4}$ " shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch"; automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

*Normally set for $2\frac{1}{2}$ - 5" lbs. Can be modified for other requirements.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

THE RCA MARK 10 ALL TRANSISTOR CB 2-WAY RADIO

The RCA MARK 10 is the latest in a long line of quality 2-way radios from RCA. Fully transistorized, the MARK 10 draws only a fraction of the current required to power tube units making it particularly useful for installation in automobiles and other vehicles. Because the MARK 10 uses all silicon transistors, dependable performance is assured at operating temperatures ranging from -23 degrees to +130 degrees F.

Among a host of operating features, the versatile RCA MARK 10 has provision for public address use with a PA switch on the front panel and an external speaker jack which de-activates the internal speaker. The MARK 10 may be connected to a standard 12-volt DC power source with either positive or negative ground. A separate, voltage-regulated matching AC power supply with auxiliary speaker is available for connection to a 120-volt AC, 60 cycle power source.

BANTAM JACK PANELS

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only $\frac{1}{2}$ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks in a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a $1\frac{1}{2}$ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

BANTAM JACK PANEL SPECIFICATIONS

Panel: Aluminum alloy, extruded, $1\frac{1}{2}$ inches wide for standard 19 inch rack mounting.

Jack Mounting: Four molded plastic inserts, each provides for 24 jacks. Pairs of jacks on $\frac{1}{4}$ inch centers. Double row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.

Panel mounting: Mounting brackets are integral part of panel.

Designation Strip: Extruded clear plastic.

Panel Finish: Anodized, Black.

BLUE *Ribbon*® CONNECTORS

The Amphenol gold-plated ribbon connector provides more contact mating surface than any connector of its type. Applying the principle of the wedge, ribbon contacts exert a continuous flexing action against each other while mated, providing unusually low contact resistance. The Blue Ribbon® contact is self-wiping for reliability throughout its long life, and is available with 8 to 32 contacts. Cable to panel versions are also available.

Micro RIBBON® CONNECTORS

Amphenol's Micro Ribbon® connector is a miniature version of the Blue Ribbon. It features 14 to 50 contacts, low contact resistance, self-wiping action and miniature size.

Min-Rac 17 CONNECTORS

Amphenol's Min-Rac 17® connector is highly suited for saving needed space for proper ventilation, component mounting, or chassis size reduction. Mounting depth is less than most "shell-less" rack-and-panel connectors. It provides up to 50 Poke-Home® terminals in half the insert space required for standard rack-and-panel connectors. Poke-Home contacts are available in either crimp or solder versions.

HEX-TYPE CONNECTORS

Amphenol provides a complete family of miniature rack-and-panel and cable-to-chassis connectors for interconnection in a wide range of applications. Hardware and contacts are interchangeable. Bodies are molded of diallylphthalate; gold-over-silver contacts will not tarnish or corrode and can be soldered without pre-tinning even after long storage. All hardware is nickel-plated solid brass.

126 SERIES CONNECTORS

The 126 Series is a versatile group of connectors available in 11, 15, and 20 contacts—with or without protective can and cable clamp. Rated at 900 volts RMS, 60 CPS at sea level. Bodies are mica-filled phenolic; contacts are gold-plated.

94 SERIES POKE-HOME® CONNECTORS

Amphenol's 94 Series rack-and-panel connectors feature Poke-Home contacts. Aluminum shells are cadmium plate, chromate treated. Useful for any rack-and-panel application, the 94 Series is especially valuable where circuits must be changed frequently within the connector. Poke-Home contacts can be wired and then inserted into the mounted or unmounted connectors in any desired position.

MICRO-MINIATURE CONNECTORS

Amphenol provides three additional complete series of subminiature connectors designed for modules, stick-circuitry, thin style printed circuit boards, and other micro-miniature applications. Use of the Micro-Mod®, Micro-Min® Series, and Micro-Edge® connectors is limited only by the imagination of the design engineer.

PRINTED CIRCUIT CONNECTORS

Amphenol's printed circuit connectors are available with ribbon or tuning fork contacts. The broad selection of contact tails represents the most complete line in the industry.

POKE-HOME® CRIMP MICRO-MINIATURE CONNECTORS

Amphenol micro-miniature connectors are now available with a choice of high-density contacts: Wire-Form for economically solving virtually every contact application or new Relia-Tac for extra high reliability. Both feature handy crimp termination on the following connectors:

Mighty-Mite®—cable-to-panel and cable-to-cable application; 7 to 61 contacts.
Tiny Tim®—module and rack-and-panel application; 5 to 33 contacts.
Micro-Rac®—rack-and-panel, cable, and module application; 52 to 104 contacts.
The 221 Series Strip—permits cutting and stacking in unlimited shapes.

**MS CONNECTORS**

Amphenol builds MS connectors to the latest issue of MIL-C-5015 Specification. They are designed, manufactured, and approved under this specification for the armed forces, and are ideal for commercial and industrial applications which require the same versatility and dependability.

**MS — E CONNECTORS**

Amphenol's resilient dielectric MS connector meets all environmental requirements of the latest revision of MIL-C-5015. Its unitized grommet eliminates the use of bulky cable clamps, and results in a considerable reduction of length and weight in relation to standard MS connectors.

**MS — R & 69 POKE-HOME® CONNECTORS**

Amphenol Poke "R" solderless connectors provide all the lightweight environmental-resistant features of MIL-C-5015s "R" Class with two important additions: Poke-Home contacts and superior environmental performance. Incorporation of these two features make Poke "R" a highly preferred MIL-C-5015-type connector.

**48 SERIES — MIL-C-26500 MIL-C-3830 (USAF)**

Meeting or exceeding all MIL-C-26500 and MIL-C-38300 requirements, Amphenol's 48 Series combines miniature environmentally-resistant construction and Poke-Home crimp type contacts. MIL-C-26500 connectors perform with utmost reliability in temperatures of -55°C to $+260^{\circ}\text{C}$, with no re-rating up to 360,000 ft. Available with threaded and bayonet coupling.

**67 SERIES MINNIE® CONNECTORS**

Amphenol 67 Series MinnieE connectors are quick-disconnect, multi-contact, miniature bayonet types. MinnieE connectors feature inclined stainless steel slots and spring loaded coupling rings. A bright orange visual indicator signals full coupling. The 67 Series has a wide variety of shell styles with environmental capability. Receptacles are available in hermetics.

**89 SERIES CONNECTORS**

Rugged and completely leakproof, Amphenol 89 Series connectors provide efficient and dependable service even when entirely submerged in mud, ice, water, or mire. They are used extensively in missile ground-and-support systems, radar antenna installations, oil well and digging equipment, and other hard-service applications. Available in more than 70 insert configurations with 2 to 52 contacts.

**115 SERIES CONNECTORS**

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 contacts and are nominally rated at 750 volts RMS, 60 CPS at sea level. They provide maximum space efficiency for all applications where a large number of circuits must be broken quickly and conveniently. The vise-action of the screw lock permits a quick-make quick-break switching action of all contacts.

**MINIATURE "AN" CONNECTORS**

Compact, efficient Amphenol 165 Series connectors are miniature versions of standard AN/MS types. Because of their weight and space saving design they are widely used in aircraft and miniaturized electronic equipment. 165 Series connectors use bayonet couplings, and are both pressure-proof and completely waterproof-mated or apart. Hermetically sealed, 182 Series connectors mate with connectors of the 165 Series.

**172 SERIES HERMETIC CONNECTORS**

Amphenol 172 Series hermetic receptacles use an improved hard-glass compression seal with high visibility "Identoseal" contact identification. Both insert faces have ceramic white marking permanently fused to the dark brown glass. Receptacles mate with MIL-C-5015 MS plugs. The 172 Series is available in round flange, square flange, hex flange, and flangeless shells.

**83 SERIES UHF CONNECTORS**

Amphenol's UHF 83 Series consists of both small and large single and twin contact connectors. All are low-cost, general purpose connectors of non-constant impedance. They operate satisfactorily at frequencies up to 200 megacycles, can be used with caution up to 500 megacycles, and can be used at peak voltages up to 500 volts.

**MIL-CRIMP, QUICK-CRIMP & SOLDER BNC CONNECTORS**

Amphenol Series BNC connectors for small coaxial cables consist of non-constant impedance types and an improved constant 50 ohm impedance type. All incorporate quick-connect and disconnect bayonet-lock coupling and are weatherproof. Now you can have your MIL-spec and crimp it, too — with the first quick-crimp connector to meet MIL-C-23329A, Amphenol's MIL-Crimp.

**SERIES N CONNECTORS**

Completely weatherproof Series N connectors are the most popular constant impedance connectors for medium size coaxial cables. They can be used throughout microwave frequencies with minimum line unbalance or increase in standing-wave ratio. Although Series N 50 ohm and 70 ohm connectors do not mate, 70 ohm cables may be used with 50 ohm Series N connectors where impedance matching is not critical.

**SUBMinax[®] RF CONNECTORS**

Amphenol's SubMinax RF connector family provides the most complete subminiature line available from one source. The SubMinax 27 Series is gold-plated and uses a MIL-C-22557 screw-on and push-on coupling. The SubMinax 5116 is silver-plated and mates with competitive non-MIL-C-22557 screw-on, push-on coupling types. The 5116 contains only five components, saving as much as two-thirds assembly time.

**BETWEEN SERIES ADAPTERS**

Amphenol can provide the most complete line available of between-series adapters.

**OTHER RF CONNECTORS**

Types C, HN, LC, BN, TNC, LN, SKL, MB, MC, SM, TWINAX, MHV, and Terminations, as well as a variety of modifications, make up the complete Amphenol line.

**COAXIAL CABLE**

Amphenol provides the broadest line of RG and non-RG coaxial cable available, and is generally accepted as the quality leader in this field. Dielectric includes Teflon, Polyethylene, and Polyfoam.

**COAXIAL SWITCHES**

Amphenol coaxial switches provide remote and manual switching up through 4000 mc. Single pole, single throw—through 12 pole. Available with a variety of terminating connectors and relay voltages.

TRANSISTOR HEAT SINKS

Beryllium oxide is unique among inorganic materials in that it combines the characteristic pure oxide electrical properties of high resistivity and low dielectric loss with a thermal conductivity equal to aluminum metal. Where electronic applications require both dielectric insulation and high heat transfer from device to chassis, only Beryllium Oxide (BeO) can provide a satisfactory solution to the design engineers problems. Beryllium oxide, a high purity sintered BeO was developed to answer this problem. Its excellent physical and electrical properties are contained in the charts which follow.

BERYLLIUM OXIDE HEAT SINKS GIVE YOU THESE ADVANTAGES

- Increased transistor life and output
- Freedom from outgassing
- Extremely resistant to shocks, vibration and moisture
- Infinite shelf life

BERYLLIUM OXIDE TRANSISTOR RETAINERS for HEAT DISSIPATION AND ELECTRICAL INSULATION

TRANSISTOR RETAINERS

imum thermal conductivity, with absolute
ctrical insulation reliability, are offered
spring clip transistor retainers. The re-
ers provide electrical isolation for the
iconductor by means of a disc of beryl-
ium oxide ceramic brazed to the base of the
yllium copper retainer. Solid ceramic disc,
contrast to a thin insulating coating, is
ctically immune to loss of insulating value
ough cracking, abrasion, chipping or
er results of rough treatment in assem-
y. Heat transfer from the semiconductor
chassis or heat sink is not sacrificed
ce the high-purity (BeO) has thermal con-
ctivity equal to that of aluminum metal.

Barrier Terminal Blocks

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Lockouts are molded into the base so that Y terminals can be accommodated if desired. The heavy construction adds strength to the block, minimizing warpage and shrinkage. A top-mounted marker strip can be furnished.

170 SERIES SLIDER TERMINAL STRIPS

Heavy solder terminals are made of .032" brass, hot solder coated; mounted on Bakelite. Size, $\frac{1}{2}$ " w. x $\frac{1}{4}$ " thick. Mounting holes, $\frac{1}{8}$ " from center of end terminals.

Barrier Block Fanning Strips

Fanning strips serve as a convenient means for rapidly making and removing connections from barrier terminal blocks. They facilitate cable or harness wiring and minimize the possibility of subsequent wiring errors. Both straight and angle type fanning strips are available. Terminals are made of .032" brass, cadmium-plated. The 3/32" thick, 1/2" wide XP black phenolic mounts are furnished with a hole, in either the right or left side, for securing the cable with lacing twine. For larger sizes, use of a cable clamp is recommended.

Marker Strips

Marker strips are used for the purpose of labelling terminal positions on barrier terminal blocks and exposed portions of terminals from metallic mounting surface. Marker strip mounting holes correspond with those on appropriate barrier terminal block. Made of 1/32" vulcanized fibre and numbered initially from 1 with legible white numerals. Part number indicates number of terminal positions modulated.

500" series marker strips are made of 1/16" XP Bakelite, 1/4" wide and numbered sequentially from 1 with legible white numerals. Mounted on top of terminal strip as illustrated, with mounting screws.

"Y" TYPE AVAILABLE AT SLIGHT EXTRA COST

"Jones" Type Plugs, Sockets

300 SERIES CONNECTORS are from the famous line of "Jones" plugs and sockets which have been standard of the electrical and electronic industry for over a generation. For medium duty applications they are small in size with good separation between contacts.

Molded bakelite insulator has 2 to 33 cadmium-plated phosphor-bronze contacts, for cap or panel mounting. All plugs and sockets are polarized so that plugs of one size cannot fit into sockets of another size. "Knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. Rated Voltage...730 Volts rms. Contact Resistance...0.016 Ohms max. Rated Current...10A max.

In accordance with UL Standard #498, (all contacts carrying "rated" current simultaneously) as follows: Current (2-12 contacts).....7.5 amperes Wattage (2-12 contacts).....1875 watts
(15-33 contacts).....4.5 amperes (15-33 contacts).....1,125 watts

400 SERIES plugs and sockets are rated for duty beyond the range of the 300 series. Maximum rating is 1200 volts r.m.s. at 15 amperes. Average contact resistance is .001 ohms.

2, 4, 6, 8, 10 and 12 contact sizes are available, each size being polarized and suitable for either cap or panel mounting. "Knife-switch" type socket contacts are made of cadmium-plated phosphor bronze. These contacts engage both sides of the flat plug contacts, providing double the contact area.

Plug prongs are made of cadmium-plated brass $\frac{1}{8}$ " wide by $\frac{1}{16}$ " thick. Caps are finished in black wrinkle and equipped with fibre lining.

With Crimp-On Snap-In Pins

High reliability edge connectors designed for exacting military and aerospace requirements. Crimp-on, snap-in removable wire pins insert into bifurcated twin-barrel contact receptacles, permitting 2 wires per contact, 4 wires per position. Meets MIL-C-20197, latest revision, handles double sided .062" pc boards and is available in 8, 15 and 22-position sizes. 43-position size (Part No. 50-43TC) also available. Insulator is glass-filled diallyl phthalate, type GDI-30F per MIL-M-19833. Contacts are beryllium copper with 30 micro-inches gold over 200 micro-inches silver finish. Wire pins are of brass with same finish as contacts. *Patent Pending

High density edge connectors with .050" centers for use with double-sided .062" printed circuit boards. Conventional wiring plans. Insulator is diallyl phthalate, type SDG-F per MIL-M-14. Contacts are phosphor bronze with .00003" minimum gold plate. Carbon steel mounting for use in semi-flush printed circuit mounting, and cellulose acetate polarizing key available as separate items.

Designed for minimum printed circuit card wear, low insertion force and positive contact with printed circuit board. Insulator is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003" minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact.

Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

Cinch Jones Connectors

"D" SUBMINIATURE CONNECTORS

D Subminiature Connectors are designed for applications where space and weight are prime considerations. These contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of integral clamps.

Original D series has two-piece nylon insulators and solder pot contact termination.

D Subminiature connectors will inter-mate if insert arrangements correspond. These connectors are designed to meet or most of the requirements of MIL-C-8384 Rev. B. Cinch current rating is 5 amps; military current rating is nominally 1.5 amp.

ELCO SOCKETS

Commercial and MIL Types E-Z MATE* SOCKETS (Patented) 7-Pin and 9-Pin Miniature Models

CONFORMING TO MIL-S-12883-A, our exclusive, patented E-Z MATE* design will be found in all our 7-Pin and 9-Pin Base-Shield and Saddle Type Sockets (except Ceramic). This ingenious design provides a positioning-key at the top of the socket which permits the tube to "find" its correct insertion point without loss of time or pin damage. And by virtue of the E-Z MATE* feature, tube locations may now be designed into "blind" or formerly inaccessible positions.

EMC Test Jacks are designed to offer the most rugged construction and dependable performance, combined with minimum size for the most sophisticated electronic applications. Samples are available upon request. Please indicate your basic requirements.

DESIGN-YOUR-OWN CONNECTORS

Male/female custom connectors may be fabricated "on-the-job" through the use of Nurl-Loc Probes and Jacks, to fulfill any immediate or specialized requirements. Merely drill or stamp holes and add Probes and jacks as required. While not a stock item, EMC can furnish pre-assembled connectors to your specifications on special order.

TEST/PATCH PANELS

Metal panels of desired size and shape may be drilled or stamped to specification with .250" mounting holes. Nurl-Loc closed entry test jacks are pressed in for fast installation. With connectors or test panels, an infinite combination of layouts is possible, with up to 10 colors of jacks for coding.

The finest grade laminated phenolic sheets we use in our production fabrication are available to you in a range of standard sizes or special sizes cut to order; and in a variety of types.

NEMA GRADE XXXP-MIL-P-31155, paper base electrical-color natural. Most commonly used for panels and terminal boards. Excellent electrical grade and dimensional stability. Max. operating temp. continuous 250 deg. F.

NEMA GRADE G-10, MIL-P-18177B-GEE, color green **GLASS CLOTH EPOXY**. Superior chemical resistance, excellent mechanical and electrical properties. Max. operating temp. continuous 300 deg. F.

COPPER CLAD LAMINATES, XXXP MIL-P-13949 TYPE PP and GLASS EPOXY MIL-P-13949B TYPE FL-GE, are used mainly for printed circuitry. The copper foil serves as the conductor and the laminate provides the insulating support. 2-ounce copper foil is laminated to one or both sides of the insulator. We catalog both types in XXXP and G-10.

FIBERGLASS REINFORCED POLYESTER NEMA GRADE GPO-1 with a class 155C (300°F) rating. Color is Tan. Excellent mechanical and electrical properties. Fabricates similar to Phenolic and can be punched cold.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028

Trademark

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do—on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is bigger than the head of a pin! Yet the Micro-gator, with ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 3/4" jaw spread, 1 1/2" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaw stay covered whether open or closed.

JUMPERS—
LOW THERMAL E.M.F.TELLURIUM
COPPER LEADS
FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed to use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper cold-plated spade lugs cold-staked to multi-stranded

12 gauge COPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded COPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts. (Less than $0.01 \mu\text{V}/^\circ\text{C}$).

NOTES

1. Teflon should protrude .040" min. below chassis.
2. Clearance between punch and die should be held to normal shop tolerances governed by material and thickness and type.
3. Predrawn hole size is governed by material type and thickness.
4. Die diameter is punch diameter plus double the metal thickness, tolerances being consistent with normal shop practice.

INSTALLATION PROCEDURE

Simplest, fastest, most economical terminal installation known, with practically no restriction as to chassis material and thickness. Inexpensive insertion tool available from Sealectro, facilitates installation. Tool fits any drillpress (power off) or hand arbor press, to hold given PRESS-FIT Terminal. Centered over chassis hole, and with applied pressure, the PRESS-FIT Terminal slips into the hole for a rigid permanent, trouble-free installation. Just PRESS-FIT — that's it! In four easy steps:

(1) PUNCH OR DRILL HOLE . . .

.013" $\pm .002$ " less than diameter of terminal section (dia. "G" in tables) passing through chassis. Minimum protrusion of bushing passing through chassis, .040". Maximum thickness of chassis .125"; for greater thickness, ask for our recommendations. Countersink from breakout or die side of chassis (not from punch side).

(2) COUNTERSINK ENTRANCE EDGE . . .

Use 60° countersink when chassis thickness is .040" and over; use 82° countersink when chassis thickness is less than .040". This enables centering of terminal in hole and prevents scoring the Teflon bushing. Depth and maximum diameter of countersink is determined by thickness of chassis stock and bushing's major diameter.

(3) INSERTION TOOL . . .

Insertion tool is placed in chuck of drillpress (power off) or hand arbor press. Terminal is held by tool, leaving assembler's hands free to index and center chassis hole underneath tool. Proper pressure is applied and released just as soon as major diameter of terminal seats itself.

(4) PERMANENT INSTALLATION . . .

PRESS-FIT Terminal is now permanently secured in place.

"Press-Fit" installation for deep holes. As the terminal is pressfitted into the hole, the lands and grooves of the body are deflected upward, thus providing a high degree of pull-out strength as illustrated in the accompanying sketch.

Typical deep hole terminal Type FT-SM-705-L2 is a feedthru featuring a weld terminal at bottom. In this particular case, the wire is welded to the bottom terminal and drawn through the hole before terminal is pressfitted into place.

OVERLEAF FEED-THRUS

The "Press-Fit" Cloverleaf Receptacle provides economical, yet uniformly perfect solder joints by means of dip-soldering with metal chassis. The unique Cloverleaf configuration permits insertion of four, or more wire leads, plus an optional center pin post for mounting additional components after the dip-soldering operation.

E-10 For AWG-19 wire or smaller

FT-E-12 For AWG-22 wire or smaller

F-15 For AWG-20 wire or smaller

FT-E-16 For AWG-24 wire or smaller

SKT-0804—GUIDED ENTRY TEST POINT JACK FOR INCREASED CHASSIS PULL-OUT STRENGTH

Featuring a beryllium-copper form lug with unique design configuration, the SKT-0804 test point jack offers greater pull-out strength and higher resistance. The jack is designed to provide guided-entry for an .080" meter probe. The SKT-0804 construction permits uniform retention and greater support of the Teflon bushing by lug.

SEAELECTRO PROGRAM SWITCHING

SEAELECTOBOARD MODULAR CORDLESS PROGRAM BOARDS

"Seaelectboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit... move the pin to a new location and a new program function is generated.

The "Modular Seaelectboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19" relay rack, or bench cabinet, they result in a very attractive unit.

The "Modular Seaelectboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5 $\frac{1}{2}$ " x 19" rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.

SHORTING PIN

COMPONENT PIN

BLANK PANEL Cat. No. SBX-106-2. Fills in unused width. May be used for mounting other components or associated equipment. Black plastic with white filler for engraving.

MODULE RAIL Cat. No. SBX-106-1. Rails are designed for mounting on standard 19" relay racks. Offset is provided for flush panel installation. Mounting holes are provided for any combination (up to 6) of blank panels and "Seaelectboard" modules.

MATRIX MODULE Cat. No. SBX-106. A 10 x 10 "Seaelectboard" matrix bussed vertically and horizontally. Terminals are combination solder and Klip-on. Contact strips are silver plated.

SIDE PLATE Cat. No. SBX-106-3. Provides dressing, or return to lay rack frame.

ACTAN FIELD ADJUSTABLE PROGRAMMING SWITCHES

"Actan" Programming Switches provide the most flexible means available to completely field adjustable programming switching and timing. Virtually every application requirement is met with the large selection of available options and features which include: Camming and Point-to-Point Switching in a single unit, Field Adjustable Cams with Multiple ON/OFF Functions, Manual or Remote Operation, Pulsed or Time Base Functions, 10,000,000 Operations Guaranteed, Transistor Speeds to 50 Milliseconds without Appreciable Contact Bounce, Form A, B, and C Contacts in a Single Unit, Up to Independent Circuit Controls in a Single Unit, Contacts Rated for Dry-Circuit to 20 Amps, 24 VDC or 115 VAC, Removal Drums to Meet Pre-Programming Requirements, and Self-Homing on Timing Motor Drive Units.

INSTALLATION PROCEDURE FOR TEFLON TERMINALS

- For chassis or panels $\frac{1}{16}$ " (.125") or less in thickness, punch or drill hole $.013" \pm .002"$ LESS than the diameter of the bushing (dimension "A" in the tables). Minimum protrusion of assembled terminal should be .040" (dimension "B" less chassis thickness) for greater holding power. Recommendations for panels greater than .125" thick are available on request.
- Countersink the insertion side of the chassis. For chassis thicker than .040" use 60° countersink. For chassis less than .040" thick use 90° countersink. Countersink depth should be such that "Maj. Dia." shown in drawing is equal to bushing diameter (Dimension "A") of the terminal.
- Insert terminal in countersunk side of chassis, and press until shoulder of terminal seats against chassis.

"MULTI-SLIDE" SWITCHES

SERIES 39000

Revolutionary compact switching method provides versatile multiple station slide switching. Allows 1 to 18 stations per row standard on all but all-lock function which is limited to 12 stations. Requires only $\frac{3}{4}$ " depth behind panel. Narrow frame design permits mounting on compact electronic equipment without sacrificing versatility or function. Three standard functions available: **Interlock**: actuating slidebutton automatically restores previously actuated station to normal. Only one slidebutton can be actuated

at a time with standard interlock function. **Nonlock**: each station has momentary action with no interaction between stations. **All-lock**: all stations, except release, lock when depressed—restore to normal when release button is actuated. Special slide-to-release cancelling feature in interlock and all-lock frames permits immediate correction of switching error without cancelling actuated switches. Slidebuttons are on $\frac{3}{8}$ " centers. Up to 3 miniature switch stacks, rated at 3 amps; 300 watts max., AC non-inductive load, can be mounted at each station for a minimum of 1-A (SPDT) to a max. of 3-C (SPDT) per station. To order, refer to "SWITCH STACKS", Series 80P, 80UP. For power switching, snap switch

Only Switchcraft offers 3 complete lines of slide, multiple station pushbutton, and lever switches . . . 3 proven solutions to man-machine interface problems.

SLIDE ACTION . . . Series 39000 "Multi-Slide" switches provide design engineers with an entirely new switching method to solve man-machine system problems. "Multi-Slide" switches help eliminate operating confusion inherent in constant manipulation of pushbutton matrices by providing slide-switch variety. **Series 39000 Switches** offer 3 types of actuation: Interlock, all-lock, non-lock.

PUSHBUTTON ACTION . . . Whatever your requirements for switching, you will find Switchcraft "Multi-Switch" switches enable you to design a cybernetically correct, error-reducing panel. Both illuminated and non-illuminated types are available with non-lock, all-lock, interlock, push-to-lock, push-to-release functions. Illuminated types offer single or multiple lighting effects. **Series 7000 and 21000** frames are available from 1 to 37 stations in a row. Little "Multi-Switch" **Series 35000, 36000, 37000**, are compact switching units offering 1 to 18 stations in a row.

LEVER ACTION . . . Switchcraft offers the largest selection of illuminated and non-illuminated lever-type switches in the industry. They come in a wide choice of sizes, 2 or 3 position, locking and non-locking types. They range in size and style from miniaturized "Feather Lever", featuring changeable push-on color knobs to "Lever-Lite", a 3-color illuminated type lever switch; to the industry standard "Telever", a telephone type switch featuring field changeable functions.

modules can be mounted to each station. Refer to "PIGGY BACK" SNAP-SWITCH MODULES, Series SA, SC and SD under "Little" "Multi-Switch" listing. Switch frames mount on panels up to $\frac{1}{2}$ " thick. End brackets have four 6-32 tapped mtg. holes. A black slidebutton is furnished for each station and a red slidebutton is supplied when switch requires a release. A kit of chromatic legend tabs, **Part No. K-120**, is available for positive color coding of an actuated station. Kit consists of 10 tabs each of 6 colors: Red, black, green, blue, white and yellow. Pressure sensitive tabs mount easily in recess of slidebutton; can be hot-stamped for identification. The following part numbers cover basic frame only. To complete assembly, order switch stacks for each station and/or snap-switch modules, as required. Only the most commonly used frames are listed here. "GLO-BUTTONS"

SERIES X, Y, Z

Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Buttons" look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with std. .050" x .187" plungers, as Switchcraft Series 7000, 8000, and 35000 "Multi-Switch", and other switches having maintained plunger action with a max. of $\frac{1}{2}$ " failback. "Glo-Buttons" have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear (Figs. A). An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the

button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see Figs. B. All "Glo-Buttons" have black button housings and are available with std. legends: "A" thru "Z", "0" thru "99", and "ON", "OFF". Eight basic types of buttons are offered: To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order $\frac{1}{2}$ " sq. "Glo-Button" with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.
